

Revision of the Genus *Pandanus* Stickman, Part 4 Disposition of Some Later Homonyms

HAROLD ST. JOHN¹

Pandanus glauciferus St. John, nom. nov.

P. glauciphyllus C. B. Robinson, Torrey Bot. Cl. Bull. 35: 64, 1908, non *P. glaucophyllus* Ridl., Asiat. Soc. Str. Br. J. 41: 50, 1904.

Under the 1956 International Code, Rec. 73G and Art. 73 Note 2, the epithet *glauciphyllus*, differing only in the connecting vowel, and *i* being an incorrect one, is an orthographic error. The epithet *glauciphyllus* must be treated as a later homonym and under Art. 64(2) must be rejected. Hence, a new name for it is provided.

Pandanus compressus Martelli, Webbia 1: 363, 1905; 4(1): table 10, figs. 14–15, 1913.

P. tetradon Balf. f. ex Kanehira, Bot. Mag. Tokyo 52: 236–239, fig. 70, 1938, avowedly by (Gaud.) Balf. f., based on *Barroetia tetradon* Gaud., non *P. tetradon* Ridl., R. Asiat. Soc. Str. Br. J. 68: 13–14, 1915.

The genus *Barroetia* Gaud. was published in 1841 in the botanical atlas of the voyage of "La Bonite." The new genus was not given a description, and since it contained three species, the genus and its species are invalid and these cannot be adopted or transferred. Balfour in 1878 printed the combination *P. tetradon* (Gaud.) Balf. f., but did not accept it himself. Hence, *P. tetradon* Balf. f. ex Kanehira dates only from 1938 and is a later homonym of *P. tetradon* Ridl. Kanehira attempted to solve the problem by renaming *P. tetradon* Ridl. as *P. singaporensis* Kaneh. (1938), but this action was illegal, and Ridley's species stands.

For *P. tetradon* Balf. f. ex Kanehira there is an available, legitimate name: *P. compressus* Martelli, based on a collection from the Solomon Islands.
